PROFESSIONAL SUMMARY

Information Technology student at Del Institute of Technology with hands-on experience developing web and mobile applications through collaborative projects and competitions. Experienced in building REST API integrations, managing databases, and deploying applications using Laravel, Next.js, Flutter, Docker, and AWS. Strong interest in developing practical software solutions and collaborating in cross-functional teams.

PROJECTS

Frontend Developer | Jason Jewelry (Jewelry Store Management System) June 2026 – Present

- Developed Next.js product and tray management modules, implementing CRUD operations through integration with a Go/Echo REST API.
- Built responsive storefront pages and authentication interfaces, and collaborated with the backend developer to integrate login functionality.

Full-Stack Developer | SIGAP (Generative Adaptive Information System) August 2026 – September 2026

- Developed a village service information system with a metadata-driven feature generation mechanism, allowing administrators to create new service features through configurable forms.
- Implemented dynamic page and feature generation based on administrator-defined metadata, reducing the need for manual development when introducing new village services.

Full-Stack Developer | TobaNiaga (Multi-Vendor E-Commerce for Local SMEs) June 2026 – July 2026

- Developed a multi-vendor e-commerce platform supporting customer, sales, courier, and administrator roles using Laravel, Spatie Permission, Alpine.js, and Tailwind CSS.
- Integrated Midtrans checkout and implemented an order fulfillment workflow with a courier job pool and fund withdrawal functionality.

Full-Stack Developer | MedFlow (Public Transport Tracking App) April 2026 – June 2026

- Developed real-time public transportation tracking functionality, including live driver location markers and trip lifecycle management.
- Deployed the application backend on AWS App Runner with an AWS RDS database and tested the Flutter application across multiple devices.

Backend Developer | SI-DOBAT (Pharma Logistics) January 2026 – June 2026

- Developed Laravel-based microservices for a pharmaceutical logistics platform and implemented event-driven data synchronization using snapshot tables.
- Containerized application services using Docker and deployed them through Nginx on a Biznet VPS.
- Integrated Midtrans payment webhooks and automated email notifications for account registration and order status updates.

EDUCATION

Institut Teknologi Del - Diploma 3 (D3) in Information Technology August 2024 – Present
GPA: 3.57 / 4.00

AWARDS & ORGANIZATIONS

2nd Place | Medan Coding Competition (MedFlow app) May 2026

- Developed MedFlow, a real-time public transportation tracking application, as the competition entry.

3rd Place | Marpesta QRIS – Business and Innovation Plan Competition July 2026

- Proposed TaniCerdas AI, an AI-based crop disease detection solution with QRIS-enabled agricultural input recommendations.

Educator Division | Himatif, Del Institute of Technology August 2025 – Present

- Mentored 50+ junior students in programming and organized technical competitions, quizzes, and academic learning sessions.

SKILLS

Programming Languages: PHP, JavaScript, Dart, Python, Go/Echo, REST API
Frameworks & Libraries: Laravel, Next.js, React, Flutter, Alpine.js, Tailwind CSS
Database: MySQL, PostgreSQL, MariaDB, AWS RDS
DevOps & Cloud: Docker, Nginx, AWS, VPS Deployment,
Languages: Indonesian (Native), English (TOEFL 500)
